Today, Industry Professionals face tremendous challenges with more stringent environmental and budgetary constraints. These challenges have to be met with new and innovative approaches for continuous improvement that will lower costs and optimize operational conditions.

### Maximizing the Microbial Workforce™

The complex microbial population is at the center of wastewater management. The stability of this population in wastewater environments is critical and can become difficult to balance as a result of the various items flushing through facility pipes every day. At the core of EcoHancer's™ products is a unique and powerful peat extract that has proven to increase existing microbial populations and enhance their activity. This powerful material has been optimized for maximum performance within septic system environments.

### ENHANCE YOUR SEPTIC SYSTEM'S ECOLOGY

EcoHancer™ stimulates existing bacteria within the septic system and drain field.

- Clarifies Septic Tank Effluent
- Maximizes Drain Field Performance
- Remediates and Renovates Drain Fields
- Has No Harmful Bacteria or Enzymes

### AVOID SEPTIC SYSTEM FAILURE

- Malfunctioning septic systems let off offensive odors that may drive away business
- Sewage backup into your business requires costly cleanup
- A new septic system can be a substantial expense and cause major disruption to your business

**The difference between all other additives and EcoHancer™:** Most additives are bacteria cultures or enzymes. Often business operators don't realize that the bacteria killing products used in the business everyday are inevitably killing these bacteria and canceling out those efforts.

**EcoHancer™** is different because it is a potent organic food for the existing native bacteria - not a bacteria culture or enzyme. This unique material stimulates growth of native bacteria and doubles their activity.

With EcoHancer you can:

- Improve Operational Efficacy
- Rejuvenate failing drain fields
- Reduce maintenance costs
- Create a healthier workplace
- Have a greener profile
